- SQL/ PostgreSQL
- Bootstrap
- Git/Github
- JWT Authentication
- Pair programming
- Heroku
- Object Orientation

TECHNICAL PROJECTS

All projects hosted for free, please allow up to 30 seconds for dynos to warm up

TransFundr - Ruby on Rails, React, Bootstrap - [Try it](#)

A crowdfunding app for struggling trans women, with sorting and scoring systems to encourage donations to trans women of color

- + Implemented a React front end with a Ruby on Rails API back end
- + Styled with Bootstrap and dynamic routing using react-router
- + Used Amazon AWS S3 bucket for user image uploads
- + Utilized JWT Authentication for login functionality
- + Designed database schema using ActiveRecord and Postgres

TwitFlip - Ruby on Rails, React, Twitter API - [Try it](#)

A Twitter Tweet collection app

- + Implemented a React front end with a Ruby on Rails API back end
- + Styled with Bootstrap and dynamic routing using react-router
- + Fetched data from two Twitter API endpoints
- + Designed database schema using ActiveRecord and Postgres

Working While Trans - React, Ruby on Rails - [Try it](#)

An employment review website for trans people to share work experiences

- + Implemented a React front and a Rails API back end
- + Styled with Bootstrap and dynamic routing using react-router
- + Designed database schema using ActiveRecord and Postgres

Trans-Friendly Medical Providers - Ember, Ruby on Rails - [Try it](#)

A prototype map resource for finding trans-friendly medical providers

- + Implemented an Ember front and a Rails API back end
- + Utilized two Google Maps API endpoints

EXPERIENCE

Flatiron School

Software Engineering Coach | Seattle, WA | 2019

- Delivered lectures on technical and tech-adjacent topics
- Engaged students one on one to teach new concepts
- Provided debugging support for student projects
- Evaluated student code on functional and stylistic metrics
- Developed tooling to assist student progress tracking

Flatiron School

Software Engineering Student | Seattle, WA | 2018-2019

- Worked independently and in groups to develop and deploy 5 projects in a 15 week period utilizing : object-oriented programming, Ruby, Ruby on Rails, JavaScript, React, HTML, CSS, Bootstrap, relational database queries via PostgreSQL, deployment on Heroku, consumption of external APIs and implementation of RESTful APIs with Rails
